

7Band Inc. Migration Brief

Moving the nonprofit's site, 7bandinc.org, off Manus without taking it offline, and making its forms and its Donate button actually work.

SITE	www.7bandinc.org (7Band Inc., nonprofit)
LIVES ON	Manus (to be replaced)
CODE	github.com/eastmalik/7band-inc (public)
DOMAIN	Hostinger
STATUS	LIVE — must stay up throughout
FORMS	NONE WORK, including Donate — see Section 2
TARGET	GitHub Pages, auto-deploy on push

Companion to the 7Band Website Operations & Recovery Manual
and the Arise Credit Pro migration brief.

SECTION 1

Start Here

This is the fifth site to leave Manus. The hosting work follows the Arise pattern exactly: a live site, so the new hosting is built and checked before any DNS record changes. What makes this one different is what a scan of the code found.

WHAT THE SCAN FOUND

- 1. The Donate button collects no money.** It shows "Thank you for your generosity! You'll be redirected to our secure payment processor", and then nothing happens. There is no payment processor connected anywhere in the code.
- 2. Every form on the site is fake.** Contact, Volunteer, Partners and both newsletter sign-ups show a success message, or nothing at all, and send the information nowhere. Anyone who used them has heard nothing back.
- 3. The site makes claims a charity has to be able to back up.** It says 7Band Inc. is a 501(c)(3), shows "500+ Community Members Served" and "20+ Volunteer Educators", and has a news item about "50 Graduates". Donors rely on these. Section 3.
- 4. The nonprofit sends visitors to the founder's for-profit agency.** The code itself describes the Services and Academy pages as a bridge from "free nonprofit education" to "7Band Financial Agency's paid services." For a 501(c)(3), that needs a professional opinion. Section 4.

Before touching any code

- **Re-sync from Manus.** The newest code on GitHub is dated **3 August 2026**. If the site was edited in Manus after that, push from Manus to GitHub again first, or the migration will quietly roll the site back.
- **Write down the email records.** The site shows info@7bandinc.org. At Hostinger, note the MX and TXT records for 7bandinc.org and do not change them. Send a test email to that address now, so you know whether it worked before the move.
- Confirm the phone number shown (678-775-9800) is the one Malik wants on a public charity site.

SECTION 2

Forms and Donations

Fix these before anything cosmetic. A nonprofit site that cannot take a donation or answer a volunteer is not doing its one job.

Where	What it does today	Fix
Donate (/donate)	Amount picker, then a fake "redirecting" message. No payment.	Link to a hosted donation page (below). No card details ever touch this site.
Contact (/contact)	Fake "Message sent!" toast.	GoHighLevel form or webhook.
Volunteer (/volunteer)	Fake "Application submitted!" toast.	GoHighLevel form or webhook.
Partners (/partners)	Submit does nothing.	GoHighLevel form or webhook.
Home newsletter	Submit does nothing.	GoHighLevel, or remove.
News page newsletter	Fake "Subscribed!" toast. The page is not even routed.	Route the page or delete it.

Choosing a donation processor

Malik decides; the site only links to it. Common choices for small nonprofits are **Zeffy** (no platform fee, donor-tip model), **Givebutter**, **PayPal** (Giving Fund or a donate button) and a **Stripe Payment Link**. Several of them check nonprofit status before paying out, which ties into Section 3. They all produce the donor receipt, so the site does not have to.

Where form submissions go

- Use GoHighLevel, as on the other sites, but tag these contacts **7Band Inc.** and keep them out of the agency's sales pipelines. Someone who signs up to volunteer for a charity has not asked to be sold insurance.
- Remove every fake success message. If a send fails, the visitor must see an error.
- Test each form end to end before the switch, and again from the live domain after it.
- Ask Malik whether anyone has told him they donated or applied through the site. If they did, they are waiting on a reply.

SECURITY: NEVER PASTE KEYS INTO THE CHAT

Malik should never paste a GoHighLevel API key, a payment-processor secret key, a token or a password into a Claude chat. Webhook URLs and public donation-page links are fine. GitHub Pages serves static files, so every value in the build is public anyway.

SECTION 3

What a Charity Site Has to Get Right

Not legal advice. These are the points to confirm with Malik, and where noted with a CPA or attorney who works with nonprofits, before the new site asks anyone for money.

On the site	Why it matters	What to do
"7Band Inc. is a 501(c)(3) nonprofit. Your donation may be tax-deductible."	True only with an IRS determination letter. Donors deduct on the strength of it.	Confirm the letter exists. If status is pending, say so instead.
"500+ Community Members Served", "20+ Volunteer Educators"	Donors rely on impact figures; misleading solicitations are what state regulators act on.	Confirm with real records or remove.
News items: "Cohort Celebrates 50 Graduates" (July 2026) and two others	Look like real announcements.	Confirm they happened or remove.
Footer: "Financial Transparency", "Annual Reports"	Both link to sections of the About page that do not exist.	Add real content (the Form 990 is a start) or remove the links.
Footer: Privacy Policy, Terms of Use, Accessibility	All three pages do not exist and show the 404 page.	Write a privacy policy before forms go live; it is needed once data is collected.
Donate button	Many states, Georgia included, require charities to register before soliciting donations, with exemptions for small organizations.	Malik checks his registration status before turning donations on.

SECTION 4

The Nonprofit and the Agency

This is the biggest judgment call in the brief. It is Malik's decision with his advisor, not the migration's, so don't rewrite it silently. Raise it, migrate the site, and change the content once he has decided.

What the site does now

- The **Services** page features 7Band Financial Agency's insurance products (IUL, Whole Life, Term, Medicare Supplement, Long-Term Care), links to the agency, and books calls on Malik's agency Calendly. A comment in the code calls it the bridge "to 7Band Financial Agency's paid services via The Flow."
- The **Academy** page is described in its own code as the "bridge between free nonprofit education and paid Flow services".
- The **Resources** page hosts IUL infographics: "grow tax-free", "market-proof growth", "protect your principal".
- The **Events** page calls the weekly Flow webinar "Purely educational — no sales pressure." The finished Flow webinar ends with a paid offer.

Why it matters

A 501(c)(3) must operate for charitable purposes, and its resources (including its website, its name and its donors' goodwill) must not serve the private interests of the people who run it. A charity whose site directs its audience to its president's insurance business is the kind of arrangement that can put tax-exempt status at risk. It may be fixable with structure and disclosure, but that is a question for a nonprofit CPA or attorney.

Options to put to Malik

- **Separate them:** the nonprofit teaches; the agency sells. Remove the product cards, agency Calendly and IUL marketing from 7bandinc.org. At most, add one plainly disclosed line that the founder also runs a licensed agency.
- **Keep a link, with advice:** only after his advisor approves the arrangement, with clear disclosure on the page.
- **Either way, fix the Events wording.** A webinar that ends with a paid offer cannot be described as "no sales pressure" on a charity site. Either the nonprofit runs its own no-offer session, or it stops promoting The Flow.

SECTION 5

Links and Media

Media still on Manus

Nine files load from Manus's storage and are not in the repository. Download them from the Manus project while the account is active (Malik has to; Claude cannot reach Manus), commit them under `client/public/` and update the paths.

File	Used on
logo-7band_52529872.png	Footer logo
hero-community_2f44b0cc.jpg	Home hero
about-mission_6e198f1f.jpg	Home, About
programs-hero_ce0d26ec.jpg	Home, Programs, Partners
volunteer-hero_8eb4b506.jpg	Volunteer
academy-hero_65336d13.jpg	Academy
Indexed_Universal_Life_Policy_Guide_8de18451.webp	Resources (see Section 4)
Cash_Value_Life_Insurance_Benefits_dbe91094.webp	Resources (see Section 4)
IUL_Insurance_Pros_and_Cons_37e887ac.webp	Resources (see Section 4)

Broken or placeholder links

Link	Problem	Fix
zoom.us/webinar/register (Events ×3, Services ×1)	A placeholder, not a real webinar.	Point at theflow.7bandfinancialagency.com once it is live, or remove (Section 4).
7bandfinancialagency.com/retirement-strategies and four similar pages	Those pages no longer exist on the rebuilt agency site. Visitors land on its 404 page.	Remove, or link to the agency home page (Section 4).
/privacy, /terms, /accessibility; /about#transparency, #reports	No such pages or sections.	Section 3.
thesmartbeautyproject.com (4 links)	Fine. That site migrates next and keeps its address.	No change.

SECTION 6

Order of Operations

The Arise sequence, unchanged. DNS changes last, only once the new hosting is confirmed working.

Phase 1 — Prepare, with nothing switched over

- 1 Re-sync from Manus, then clone `eastmalik/7band-inc`. Run `pnpm install` and `pnpm check`; confirm a clean build first.
- 2 Remove the Manus pieces: `Map.tsx`, `ManusDialog.tsx`, `const.ts`, `client/public/__manus__`, the Manus plugins in `vite.config.ts` (copy the clean one from 7band-financial), and the umami analytics script in `index.html`. The Express server is not needed on GitHub Pages.
- 3 Add the deploy workflow from 7band-financial, a CNAME file containing `www.7bandinc.org`, and the 404 fallback.
- 4 Bring the nine images into the repository (Section 5).
- 5 Wire the forms and the Donate link (Section 2).

Phase 2 — Stand the new hosting up alongside the old

- 1 **Settings** → **Pages** → **Source: GitHub Actions**. Leave the custom domain empty for now.
- 2 Merge to main, let it deploy, and review the site at `eastmalik.github.io/7band-inc`. Judge content, not layout; styles may look wrong at that address.
- 3 Fix and redeploy until it is right. The live site is untouched throughout.

Phase 3 — The switch

- 1 **Write down the current @ and www records before changing them.** That is the rollback plan.
- 2 Enter **www.7bandinc.org** as the custom domain in Settings → Pages.
- 3 At Hostinger, point **www** (CNAME) and **@** (ALIAS, as on 7bandfinancialagency.com) to **eastmalik.github.io**. Do not touch MX or TXT records.
- 4 Wait for the DNS check and the certificate, then tick **Enforce HTTPS**.
- 5 Test every form and the Donate link from the live domain; send an email to `info@` again.
- 6 Leave Manus running for at least a week before cancelling.

Verify before declaring done

Check	What good looks like
Donate works	The button opens the real donation page and a small test gift goes through and is receipted.
Forms deliver	Contact, Volunteer and Partners each arrive in GoHighLevel, tagged 7Band Inc.
No fake success	With the endpoint broken, the form shows an error.
Claims	Every number and the 501(c)(3) line confirmed by Malik, or removed.
No 404s	Every nav and footer link, on every page, in a private window.
No Manus requests	All images load from the repository.
Email	info@7bandinc.org sends and receives after the DNS change.
HTTPS	Padlock present; Enforce HTTPS ticked; both 7bandinc.org and www work.

How to use this brief

Upload this to the new Claude Code session at the start, together with the 7Band Website Operations & Recovery Manual and the Arise brief. Point it at eastmalik/7band-inc. Sections 2 to 4 need Malik's answers; ask him early so the hosting work doesn't wait on them.
